v. 31, no. 8, p. 1245-1251.

The possibility of obtaining water-resistant and pliable  
casein films for the coating of leather was investigated.  
The addition of detergents, or of plasticizers such as  
glycerol, is effective only so long as the moisture con-  
tent is maintained. The films shrink and become  
brittle in storage.

A method is developed calculating profile losses in marine turbines with trailing edges of finite thickness for flow velocities up to the speed of sound. The investigation is based on Lot'syanskii's method of calculation in which the relationship between the boundary layers on leaving the lattice and at the trailing edges is obtained by generalizing experimental data relating to individual blade profiles with thin outlet edges (for flow velocities up to the speed of sound).
